

Who am I?

I'm a hobbyist tinkerer and a researcher with passion for automation and perception. My work focuses on how state-of-the-art computer vision algorithms perform in complex, real-world environments and how we can optimize them to balance high performance with responsible & ethical application. Outside of research, I enjoy designing mechanical structures, running my home-lab, and spending time exploring nature.

- ### Research Career
- **PostDoc @ Aalborg University & CAISA**

Jan 2024 - Now

Working on trustworthy AI by translating ethical, societal, and legal demands into computable metrics. With a focus on ensuring evaluation properly assesses the alignment of AI systems with human values rather than just technical performance.
 - **PhD Fellowship @ Aalborg University**

Jun 2020 - Oct 2023

Researched how object-detection and segmentation algorithms perform in unconstrained real-world environments. Adapted models and training pipelines for increased robustness under continuous data drift.
 - **Research Assistant @ Aalborg University**

Sep 2019 - Jun 2020

Designed and implemented an extensive sensor array for an autonomous sewer-inspection robot, which needed to process and store large amounts of data in real-time on device.

Recent Projects

Standardization and Compliance with the AI-Act

Member of the Danish AI standardization committee (S-855) and CEN/CENELEC JTC 21, contributing to standards and guidelines for responsible AI deployment, with a focus on evaluation methods and metrics for computer vision in support of the EU AI Act. Organize workshops connecting academia and industry on operationalizing responsible AI.

Long-term Thermal Drift

Collected, curated, and analyzed one of the largest thermal object-detection datasets for long-term drift assessment. Organized open challenges integrating metadata to improve robustness across seasons. Maintain public leaderboards and ongoing analyses to track and characterize performance degradation over time.

Design of long-term data acquisition setups

Designed and implemented vision sensor packages for autonomous systems in hazardous environments, including sewer-inspection robots, ROVs operating at depths exceeding 30 meters, and static long-term monitoring in ocean environments.

TOPICS OF RESEARCH

Trustworthy AI Object Recognition Video Understanding Multi-Modal Segmentation Evaluation Metrics

TECHNICAL TOOLBOX

PyTorch TensorFlow Docker Proxmox Slurm

PROGRAMMING LANGUAGES

Python C# C++

SPOKEN LANGUAGES

Danish English

EDUCATION

PhD in Computer Vision

2023

Aalborg University

Thesis: *Generic Object Detection and Segmentation for Real-World Environments*

Cand.Sc. in Medialogy

2019

Aalborg University

Thesis: *Affect-Based Trust Estimation in Human-Robot Interaction*

Bach.Sc. in Medialogy

2017

Aalborg University

Thesis: *The Use of Gamification for Visualizing Data in Industry 4.0*
